

The Next Generation in Supporting Autism Assessment

Scan to sign up for
SRS-3 updates

Backed by research. Published by the leader in autism assessment.

The SRS-3 is a comprehensive revision of a tool widely used in clinical, educational, and research settings to assess autism-related traits and reciprocal social behaviors in pediatric and adult populations. It empowers school psychologists to move from uncertainty to clarity—informing diagnostic and eligibility decisions, intervention planning, and research studies.

What's New:

- Neurodiversity-affirming and gender-neutral language
- New clinical sample
- Options for gender-specific and combined norms
- Greater item clarity
- New school-age self-report form
- New inconsistency index
- Refined treatment subscales
- New report options
- Improved interpretive guidance

About the Author

John N. Constantino, MD is the creator of the Social Responsiveness Scale (SRS[®]), a global assessment standard for autism translated into over 70 languages. He founded the Social Developmental Studies Laboratory and holds an MD from the Albert Einstein College of Medicine, where he completed combined residencies in pediatrics and psychiatry. He is a professor at the Emory University School of Medicine and serves as the Liz and Frank Blake Chair and inaugural System Chief of Behavioral and Mental Health at Children's Healthcare of Atlanta. Previously, he directed the Division of Child and Adolescent Psychiatry at Washington University in St. Louis.
